***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

The subject matter of the independent claims could either not be found or was not suggested in the prior art.

The subject matter not found in independent claim 32 was a method of reducing the chances of infection in an animal's udder, the method including the step of drying off the animal after the inserting and retaining the device within the teat streak canal after a build up in milk pressure that occurs immediately after the drying off without the device being ejected in combination with the other elements in the claim.

The subject matter not found in independent claim 49 was a method of reducing the chances of infection, the method including the step of dislodging the device from the streak canal by mild pressure generated as a consequence of lactogenesis in combination with the other elements in the claim.

The closest art of record Martin (US 2498374) teaches a method of reducing the chances of infection in an animal's udder, however Martin does not teach the step of drying off the animal after the inserting and retaining the device within the teat streak canal after a build up in milk pressure that occurs immediately after the drying off without the device being ejected. Also, Martin fails to teach the step of dislodging the device from the streak canal by mild pressure generated as a consequence of

lactogenesis, the device of Martin dissolves in the teat canal, and the method of Martin is silent in the step of retaining the device within the teat streak canal after a build up in milk pressure. The method of the current invention withstands the build up of a milk pressure that occurs at drying off.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
